Category:File archivers1. Field of the Invention The present invention relates to an image forming apparatus and an image forming method that are suitable for use with a digital copying machine, a printer, a facsimile machine, etc. 2. Description of the Related Art Hitherto, various image forming apparatuses have been proposed and put into practical use. For example, Japanese Patent Laid-Open No. 9-107971 discloses a technique wherein after the formation of an electrostatic latent image on a photoreceptor, the latent image is visualized by toner to obtain a toner image, the toner image is transferred to a recording medium, and

after the transfer of the toner image, residual toner remaining on the photoreceptor is cleaned. In addition, Japanese Patent Laid-Open No. 9-107971 discloses that after the cleaning of the photoreceptor, the surface of the photoreceptor is again charged by a corona charger, and the surface of the photoreceptor is uniformly charged by the corona charger by a method in which a main charger, a first transfer charger, and a second transfer charger (primary charger) are switched (selected) in sequence, and the surface of the photoreceptor is charged again by the secondary charger in order to maintain

the toner on the surface of the photoreceptor. According to the image forming apparatus described in Japanese Patent Laid-Open No. 9-107971, after the cleaning of the photoreceptor, the surface of the photoreceptor is uniformly charged by the corona charger in order to stabilize the performance of the apparatus. After the image formation, when the apparatus is ready for the next image formation, the surface of the photoreceptor is uniformly charged by the corona charger so as to form a uniform electrostatic latent image on the surface of the photoreceptor, and thus the quality of the formed image is

stabilized. In addition, according to the technique described in Japanese Patent Laid-Open No. 9-107971, when a toner image on the photoreceptor is to be transferred, the surface of the photoreceptor is charged by the first transfer charger in a direction opposite to the image transfer direction, and at the same time, the surface of the photoreceptor is charged by the second transfer charger so as to transfer the toner image to the recording medium. In this case, in order to transfer the toner image to 4bc0debe42
